

An agile, powerful and secure storage infrastructure ensuring business continuity.

Our *Secured Copy Service (SCS)* proposes a primary backup replicated locally and remotely in one of our data centres.

Compatible with most backup software used in enterprise, communications and logical data transfer are performed through secure VPN tunnels.

The **cost of our service is simple and predictable** and only depends on the volume of logical data to protect and the available bandwidth.

Instead of charging its service on the total of transferred data, **ESI charges after data deduplication**, making its clients benefit from the advantages of the technology!

Benefits of SCS from ESI

- 📌 **Simplified cost structure** - service easy to estimate and budget
- 📌 **Datacentres located in Canada** - ensuring compliance with Canadian legislation (PIPEDA)
- 📌 **Management** of the service provided **by ESI personnel**
- 📌 **Reduction of ecological footprint** and costs related to management of tape transportation & conservation
- 📌 **Better management** of the exponential data **growth**

ENSURE backup reliability,
REDUCE recovery times and
have better **CONTROL** of
your costs!

ENTRUST ESI experts the
management and operation of
your IT assets and **FOCUS** on
developing your business!
