

CONTINUOUS MICROSOFT 365 & AZURE GOVERNANCE

ESI CloudCare

Administer. Secure. Govern. CloudCare keeps your Microsoft Cloud environment well configured, secure, and aligned with best practices, continuously.

01

Reduce configuration risk

Continuous verification of Microsoft 365, Entra ID, and Azure configuration. Gaps are identified and corrected before they become incidents.

02

Access Microsoft expertise

A specialized capability in Conditional Access, Exchange Online, Teams, SharePoint, OneDrive, and Azure, without building a dedicated internal team.

03

Free up your IT team

Governance, configuration reviews, and continuous improvement become a recurring capability, rather than a task that's always postponed.

04

Maintain your posture over time

A baseline is established, gaps are detected continuously, and your security posture is maintained against a constantly evolving environment.

QUESTIONS MOST ORGANIZATIONS CAN'T YET ANSWER

- ❓ Are our privileged accounts properly controlled?
- ❓ Is external sharing still under control?
- ❓ Are our applications and integrations governed?
- ❓ Are our MFA and Conditional Access complete?
- ❓ Have our permissions drifted over time?
- ❓ Has the impact of recent Microsoft changes been assessed?

WHY NOW

- ▶ A SOC detects suspicious activity, but doesn't reduce the conditions that make it possible.
- ▶ Without continuous governance, gaps are discovered during an incident, an audit, or a project.
- ▶ A secure configuration today won't necessarily stay secure tomorrow.
- ▶ Microsoft 365, Entra ID, and Azure converge identity, email, data, and access: a single critical environment.

WHAT YOU GET

- ✓ **A configuration baseline and continuous drift detection.**
- ✓ **Clear visibility into gaps, risks, and decisions to make.**
- ✓ **A specialized Microsoft team to support your internal administrators.**
- ✓ **Documented exceptions and structured continuous improvement.**

THE QUESTION TO ASK

Who, in your organization, **continuously verifies that your Microsoft environment stays well configured, secure, and governed?**

CLOUDCARE IN ONE SENTENCE

Continuously reducing your Microsoft risk surface

CLOUDCARE COMPLETES YOUR SERVICE ECOSYSTEM

CSP

Acquire and manage Microsoft and Azure licensing.

SOC

Detect and respond to security events.

BaaS

Back up and protect data against loss or compromise.

CloudCare

Administer, secure, and govern Microsoft Cloud, continuously.
